

Virtual Disaster Recovery

Provided by BackupVault

Introduction

BackupVault InstantData enables SME's to combine their cloud-based backup solution with a robust Disaster Recovery feature.

With traditional backup and restore methods, you typically have to wait to restore a large file like a database. With BackupVault InstantData you can start using the file immediately and the innovative technology will "rebuild" the file as and when users access certain parts.

InstantData Modes

01 Temporary File Access

You can access your backups on a mounted virtual drive which can be created on any PC. Simply use Windows Explorer to navigate to your desired backup date, then access your files. You can either copy the files to a different location or even double click to open the file.

02 Permanent File Recovery

In the event of a disaster a typical restore can take a while, but in this mode, InstantData can give you access to your files immediately. The technology automatically rebuilds blocks of data whilst you are accessing the file, giving the impression of a complete recovery, all whilst the data is recovering in the background. This will even work with SQL and Exchange databases.

03 Full System Recovery

FSR enables you to backup an entire server automatically to the BackupVault platform. It doesn't matter if the server is physical or virtual. Administrators can choose to restore as a complete Hyper-V or VMware image and even share the restore link with other colleagues to boot up the server in a different location.

Key Benefits

Rapid Recovery Time
(very low RTO)

Recover servers (physical and virtual) into a bootable state using Full System Recovery

Recover usable data to a local drive without requiring disk space

What Our Customers Say

As an IT consultant for a number of large clients I needed a backup solution that was both fast and über reliable. The solution provided by BackupVault offers this and has helped a number of my clients recover data within minutes that would of previously taken hours to recover using their old tape solution.

Mark Sinclair – Local IT Care
localitcare.co.uk

We have been very impressed with BackupVault, it is so much more reliable than the previous service we used. We have had to restore files on a few occasions and found the restore process easy to use and very fast.

Tricia Schroeder – LA Moore Ltd
lamooreltd.co.uk

We use BackupVault to back up our data. A friendly, efficient and reliable company offering great 24 hour technical support. I would highly recommend them.

Tina Jackson – Scottish Business Resilience Centre
