

BackupVault Cloud Backup

for Servers, PCs & Laptop

Introduction

BackupVault Cloud Backup is a secure, UK based, offsite backup and recovery solution for your critical data. Don't wait for a disaster to strike when you can protect your critical data [today](#).

Why BackupVault Cloud Backup

Daily, completely automatic backup of your critical data

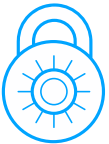

Your data is held in two UK based datacentres

Quick & easy software to setup

24 hour UK based technical support

Your data is protected by a 256bit AES encryption key that only you know

Recover your data easily from ransomware viruses

Your data is encrypted during transfer and remains encrypted when at rest

What Our Customer's Say

BackupVault is fantastic. We started rolling it out to our clients about 5 months ago, and haven't looked back. The software is pretty much set up and there's no need to do much else.

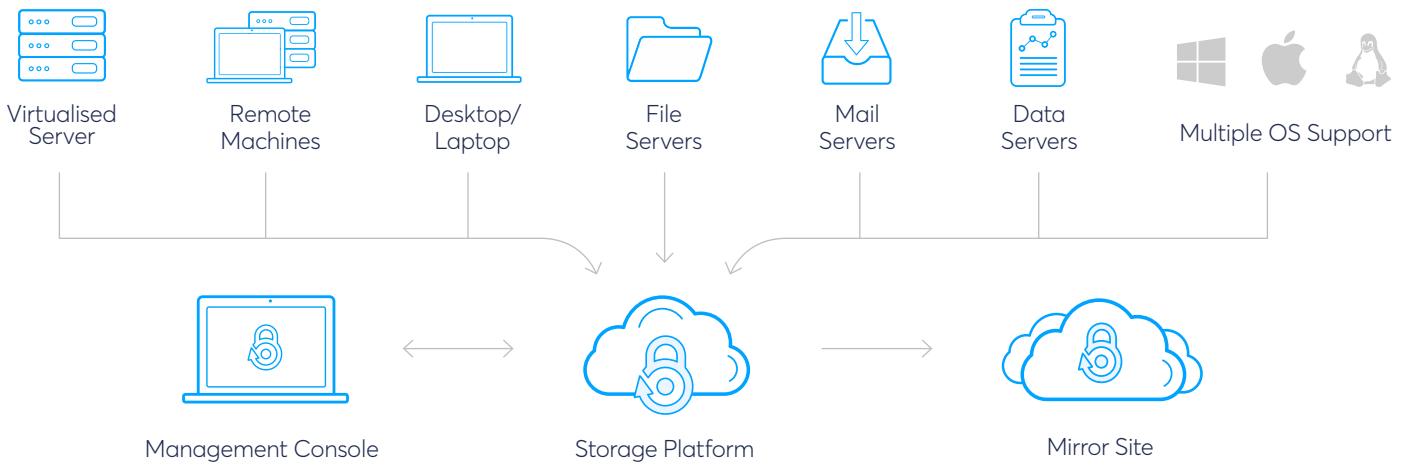

Rob Whittlesey – Digital Medic Ltd
digitalmedic.co.uk

Apart from the fact that you don't need to remember to back up your data or remind anyone else to do it, the service is invaluable when something goes wrong.

Hilary Graham – Affinity Villas

Technical Features

Multiple Operating System Support

Support for Windows, Mac and Linux (including CLI only) operating systems. Hyper-V and VMware guest protection are also supported.

Rapid Backup & Restores

BackupVault's new ESE client is proven to be the fastest commercial backup solution currently available. Third party tests show it is at least 3 times faster than its closest competitor.

New Backup Engine

The efficient indexing engine in the ESE client rapidly scans data and only sends new and "changed parts of existing files", saving considerable time and bandwidth. Millions of files and large databases can be backed up in minutes.

Database Support

We support the backup and recovery of all common databases such as MS SQL, MySQL, Postgres and Capita SIMS. Other less common databases can be backed up using our custom script plugin. We can also backup all major NAS drives and network shares.

Enterprise Grade Reporting

BackupVault Cloud Backup features an enterprise grade reporting application. Reports can be scheduled to be delivered daily by email or run manually for complete peace of mind. BackupVault can also customise reports should this be required.

InstantData Disaster Recovery

Run disaster recovery tests with ease using our new InstantData feature. Instantly present backed up data to a virtual drive, allowing for direct access to critical data when required.

Long Term Retention

By default, users can restore between 30-60 days of backup. This retention period can be customised and increased if required. Financial and legal data is routinely required to be retained for up to 7 years.

Snapshot Backups & Recovery

For large data sets or slow internet connections users can perform backups to a USB disk. The USB disk can then be imported directly into our datacentre. We can also offer the reverse feature for recovery if requested.
